

DENSIFIER

WATER-BASED // SODIUM SILICATE

SILA-TEK™ 3500

Concrete Densifier

AN INDUSTRIAL-GRADE, WATER-BASED, SODIUM CONCRETE DENSIFIER FOR USE AS A STAND-ALONE PRODUCT OR AS A PRIMER TO STRENGTHEN AND HARDEN CONCRETE.

BENEFITS:

- // Increases Abrasion Resistance
- // Reduces Water Absorption
- // Strengthens Concrete
- // Perfect for Polishing and Priming
- // Increases Penetrating Sealer Performance

DESCRIPTION:

Sila-Tek 3500 is a clear penetrating densifier that hardens concrete making it up to 40% stronger. It reduces dusting, efflorescence, and the movement of moisture up through the pores of the concrete. Its larger molecule size makes it an excellent, cost-effective choice for polishing concrete. When properly applied, Sila-Tek 3500 offers significant improvements in surface abrasion and chemical resistance and will significantly improve the strength and durability of the concrete.

DESIGNED FOR:

Commercial, industrial & retail concrete floors / slabs. Perfect for stadiums, plazas, food courts, parking garages and machine shops. Also used for exterior concrete driveways, garages and patios.

Note intended for: Bricks, concrete blocks, cinderblocks or previously polished concrete/extremely smooth concrete surfaces.

MEETS OR EXCEEDS:

ASTM C-1353: Abrasion Resistance
ASTM C-779: Abrasion Resistance
ASTM C-642: Density, Absorption, and Voids
ASTM E-303: Surface Frictional Properties
OHD L-34: Depth of Penetration

SIZE(S):

Concentrated

1 Gallon
55 Gallon
