

DesignRail® Single Corner Post

This **Single Corner Post** is designed to replace the use of two posts at corners in projects using DesignRail® Aluminum Railing Systems, saving money and making the railing even more “View Friendly”!

Benefits

- Reduces overall material costs by requiring ONE post in corners instead of two
- Provides a more open view by reducing the number of posts in the frame

Product Information

- Specially engineered to withstand CableRail tension in two directions
- Pre-drilled with horizontal slots that allow the cable to easily pass through a 90-degree corner
- Includes a composite insert which isolates the cable from post contact and helps center the cable when tension is applied
- Our unique Curved Lacing Needle makes feeding the cable through the post fast and easy (sold separately)

Ordering Notes

- Available in standard DesignRail® heights (36”, 38”, 42”), as well as custom heights (additional charges may apply)
- Available for base mount, fascia, and fascia bracket mount applications (not compatible with stanchion mount option)
- Available in all Classic and Express Yourself DesignRail® colors
- Obround isolation bushings are included in orders for projects in harsh environments
- Post Caps (with a weep hole) for the bottom of the post are included in orders for projects using a fascia mount configuration
- Standard Post Caps for the top of the post are included in orders for projects using the Series 100 or 150 top rail
